

LONG TERM INVESTMENT IN STOCK MARKET GIVES MAGICAL RETURNS

Warren buffet is sitting on the net worth of 64 billion thanks to his long term investments in stocks.

Each passing year is multiplying the wealth of Warren buffet by leaps and bounds.

Even if he does nothing his wealth will keep multiplying

How this is happening??

Which force is acting behind it??

THE FORCE IS COMPOUNDED RETURNS

Compound interest is interest earned on interest

The act of declaring interest to be principal is called compounding.

GROWING PRINCIPAL DUE TO COMPOUNDED INTEREST

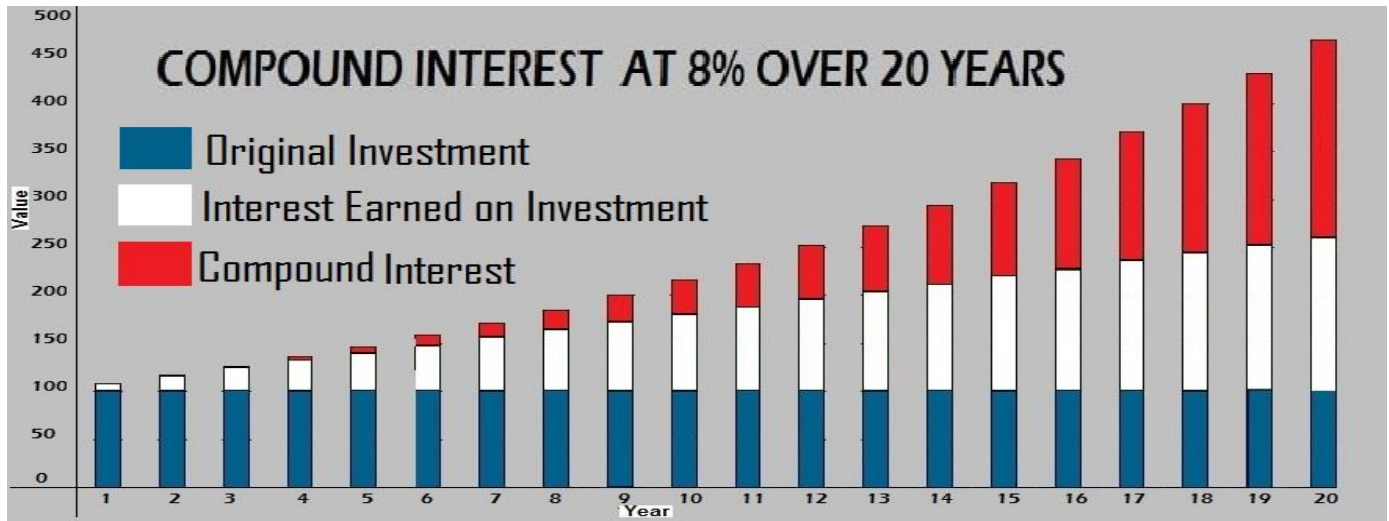

DO YOU KNOW INVESTMENT IN EQUITIES GIVE COMPOUNDED RETURNS?

If you have invested 10k in stock, and it goes up 20% in a given year, you have made 2k. If it goes up 20% again the next year, you won't make another 2k, rather you'll make 2.4k, because you're now working with 12k amount, not 10k. And if your stock continues to return 20% each year, your gain will continue to grow exponentially larger, even if you've never added any additional principal.

That, in addition to the dividend thing, is how compounding works with stocks.

SO HOW AND HOW MUCH DOES IT MATTER,
LET'S SEE DIFFERENCE BETWEEN COMPOUNDED AND SIMPLE INTEREST.

While some other assets also give us compounded returns, but equity asset classes goes ahead of all. It is an extreme case of compounding since most interest is compounded on a monthly, quarterly or semiannual basis. But equity provide continues compounding. In continuous compounding, interest is calculated and added to the account's balance every infinitely small instant.

So benefit rises even more.

These magical returns increases with increasing pace with passage of time
